FULL STACK ENGINEER | TYPESCRIPT (NEXT.JS, NESTJS) - C# / .NET - SQL SERVER | FINTECH

Summary

Full stack engineer, 4 years in financial systems, equally at home in TypeScript (Next.js, NestJS) and C#/.NET with SQL Server. As a junior, took a core endpoint from 242s to 12s; later secured 228 endpoints after a security audit. Promoted to mid-level in 12 months.

Skills

Backend: TypeScript, Node.js, NestJS, C#, .NET 6/7/8, ASP.NET Core, Entity Framework Core, REST/OpenAPI, BFF pattern, domain-oriented service decomposition, SOLID, webhooks, data mapping, event-driven integration

Frontend: Next.js, React, Tailwind, SWR, HTML5, CSS3, Three.js, react-three-fiber, Flutter, WebSocket

Data and Performance: SQL Server, T-SQL, stored procedures, query optimization, execution-plan analysis, indexing, transactions (ACID, Unit of Work), Redis

Security and Auth: OAuth2, JWT, Microsoft Entra ID, role and claim-based authorization, secrets management, OWASP-aligned remediation

DevOps and Quality: GitHub Actions, Azure DevOps, Azure Key Vault, SonarQube, xUnit, unit and integration testing, code review, on-call incident response, Agile/Scrum

AI tooling: LLM development tools (Claude Code, Cursor, Copilot), MCP integrations, agent workflows, AI output verification

Experience

FinFast (Santiago, Chile) - Full Stack Engineer, Junior to Mid-Level Aug 2024 - Aug 2026

Fintech platform for factoring, guarantees, insurance and credit. Fully remote from Peru for a Chilean company. Stack: TypeScript (Next.js, NestJS), C#/.NET 6/7, SQL Server, React, Redis, Azure DevOps.

Mid-Level Full Stack Engineer Aug 2025 - Aug 2026

- Built the front end, BFF and service layer of FinFlow (Next.js + NestJS), the internal delivery platform where a ticket auto-creates its GitHub branch and runs from the UI or a chat client via MCP - every developer's only path to close a story.
- Built a decision engine (NestJS) that centralized business rules behind a BFF, so pre-approved risk-team exceptions stopped breaking the flow and raising urgent tickets.
- Contributed to migrating legacy .NET services to NestJS with a coexistence strategy (versioned views and procedures, segmented schemas), with no mass data migration. Co-built 3 GitHub Actions workflows: deploys 30+ min to 4.
- Implemented endpoint-level authorization across 228 endpoints (roles and claims, dynamic permissions in Redis, OAuth2/JWT via Microsoft Entra ID), closing the critical findings of an external ethical-hacking audit (CWE-285, 256, 602, 200, 693, 497) and coordinating the fix.
- Helped build Hermes, a Teams agent grounded on product docs that autonomously resolves ~90% of recurring factoring and insurance incidents and reviews PRs; my written verification loop caught AI-reported work that was never done.

Junior Full Stack Developer - promoted after 12 months Aug 2024 - Jul 2025

- Volunteered as a junior for the core invoice endpoint and cut its latency from 242s to 12s for the 29 operations staff using it daily: rewrote critical stored procedures, redesigned indexes across 6+ tables, paginated and decomposed the endpoint. Query cost ~125,000 ms to ~2,300 ms; logical reads ~4.5M to ~23K. One of the reasons for my promotion.
- Exposed a webhook that accounting called on each registered payment, mapping it onto payment agreements: the first payment created the agreement and each instalment advanced its state - no manual reconciliation.
- Rebuilt payroll batch processing with a Unit of Work and one commit per batch: 14 payrolls from ~24 min to ~48 s, 672 commits to 14, and no more inconsistencies (~15% of records). Covered with xUnit tests.

9780 Bitcoin (Arequipa, Peru) - Frontend Engineer, Fintech Products Feb 2023 - May 2024

Built the client interface for a cryptocurrency exchange in Flutter across mobile, desktop and web, consuming the exchange's own pricing API and hardening validation on money-moving flows.

- Built the webhook endpoint that received pricing updates pushed by the exchange's own service roughly every 30 seconds, instead of polling for them.
- Shipped a real-time crypto price feed (React and WebSocket) that ran in production on RPP Noticias, one of Peru's largest news sites, coordinating the release with the external engineering team.

Tres Niveles - Junior Web Developer (remote from Arequipa to Lima) Oct 2022 - Feb 2023

Two client websites end-to-end on WordPress, PHP and MySQL, from Figma prototype to production.

Project, Certifications and Education

ArchiVR - 3D browser experience (Three.js, react-three-fiber), university thesis archivr-2c65c.web.app

AWS Certified Cloud Practitioner (CLF-C02) - in preparation, exam planned Dec 2026; Solutions Architect - Associate next

Unit Testing with C#/.NET (Platzi) | Azure Fundamentals (Código Facilito, 2026) | AI Development (BigSchool, 2026)

B.Eng., Computer and Systems Engineering - Universidad de San Martín de Porres, Peru, 2020-2024 (conferred 2026)
